

Are you concerned a cyber crime can happen in your own home?

With data breaches and cyber attacks on the rise, it's important to make sure you and your family are protected from cyber crimes at home. Do you know how to prevent a cyber invasion on your home devices?

We do. Odell Studner offers our clients security consulting and access to IT services at reasonable rates to protect your home. Our team follows a three-step approach:

1 VULNERABILITY ASSESSMENT

A vulnerability assessment is an integral component to ensuring a cyber-safe home. Our cyber partners analyze your network and security infrastructure for any weaknesses and provide a detailed written report of all detected vulnerabilities.

2 VULNERABILITY RECOMMENDATIONS AND REMEDIATION

Based on the results of your vulnerability assessment, our partners can resolve issues that make you susceptible to a cyber crime. Depending on the severity, this could mean engaging the services of a third party.

3 CYBER LIABILITY INSURANCE

Whether for your computer or mobile device, or for your laptop or connected home technology, you need the right protection for your exposures. Our team works closely with a number of insurance companies to offer our clients a suite of cyber coverages and services.

In 2017, cyber criminals made off with \$75,000 on average for each successful personal cyber fraud attack on households worth \$5 million or more.

"Boy, was I surprised! Robert spent three hours at my house uncovering a number of issues that I never knew about and which have since been easily remedied. Now I really do sleep better at night knowing my personal devices are as well protected as those of my own company."

"As an insurance broker, we can now offer these services to our clients with confidence knowing we can protect their personal assets in more ways than just the sale of insurance."
